

# **Geo-Targeted Alerting System (GTAS)**

## **NOAA - FEMA Joint Project**

# GTAS Inception

Executive Order 13407 signed June 26, 2006 began the development of the Integrated Public Alert and Warning System (IPAWS) which includes the *Geo-Targeted Alerting System*

# GTAS Primary Objective

- Determine How Toxic Plume Dispersion and Advanced Weather Information Can Be Disseminated From WFOs For Use By State And Local Government Emergency Preparedness Agencies
- Establish GTAS Requirements for AWIPS II

# Demonstrate Proof-of-Concept GTAS Capabilities

- Deploy GTAS to Four WFOs & Their Respective State/Local Emergency Operations Centers
  - Southern Region - Dallas/FT Worth
  - Western Region - Seattle
  - Central Region - Kansas City
  - Eastern Region - New York City
    - Washington DC run from NOAA Headquarters

# GTAS 2009 Budget

• Global Systems Division	\$1.850M
• National Weather Service	\$250K
• Air Resources Laboratory	\$125K
• National Ocean Services	\$75K
• Total	\$2.3M

# GTAS Project Staff

# Technical Development

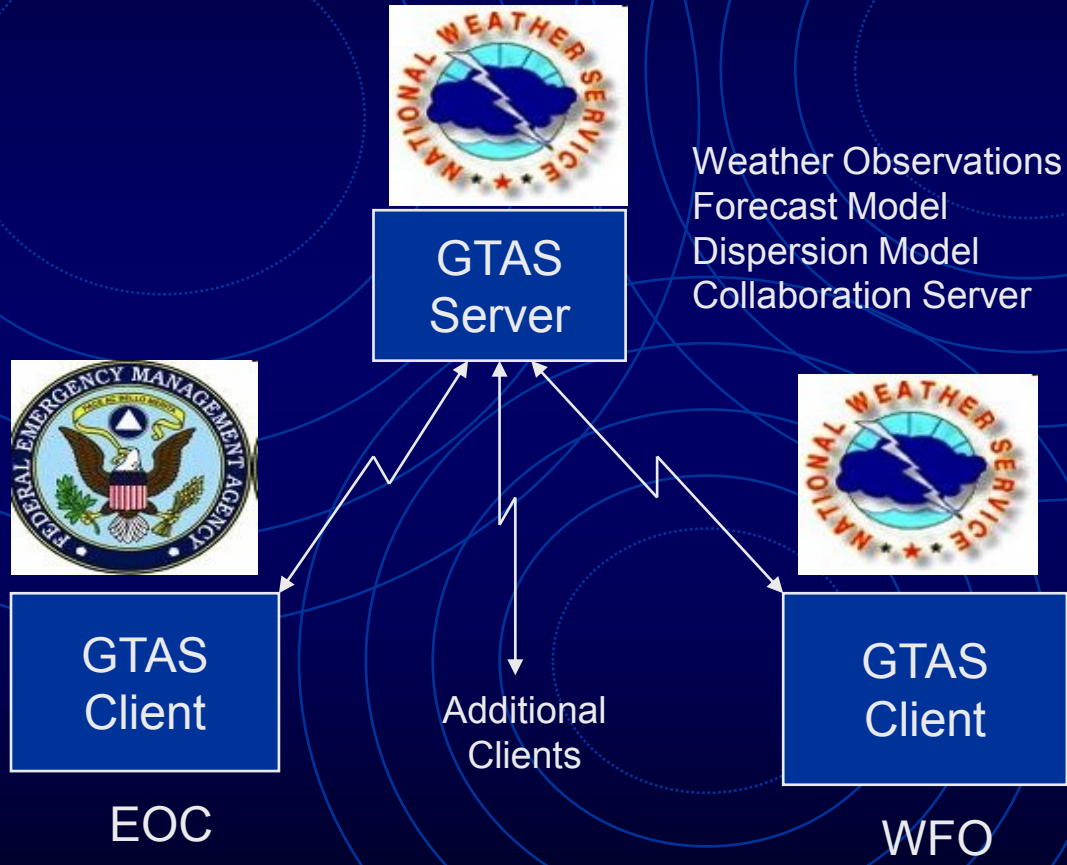

## GTAS System Integration

Herb Grote

# System Concept

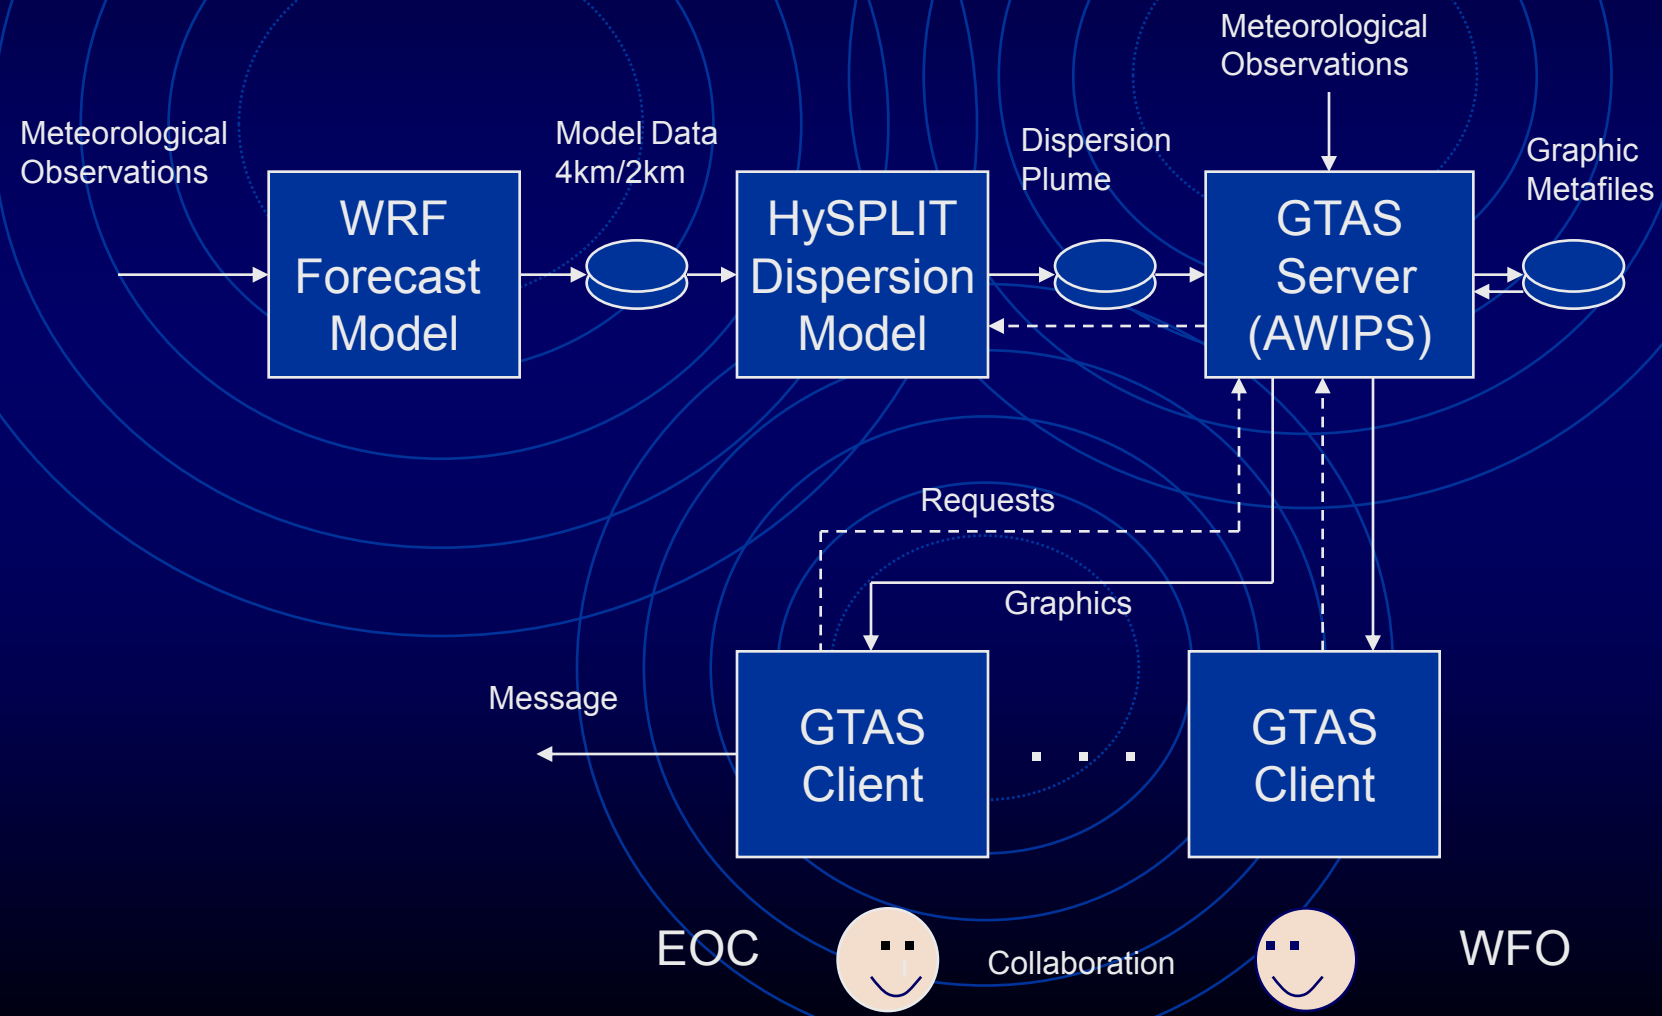

# Major GTAS Subsystems

- WRF/NMM  
High Resolution Weather Forecast Model
- AWIPS/IGC  
Real-time Weather Observations
- HYSPLIT  
Dispersion Model
- FXC  
EOC and WFO Display System

# Basic System Architecture

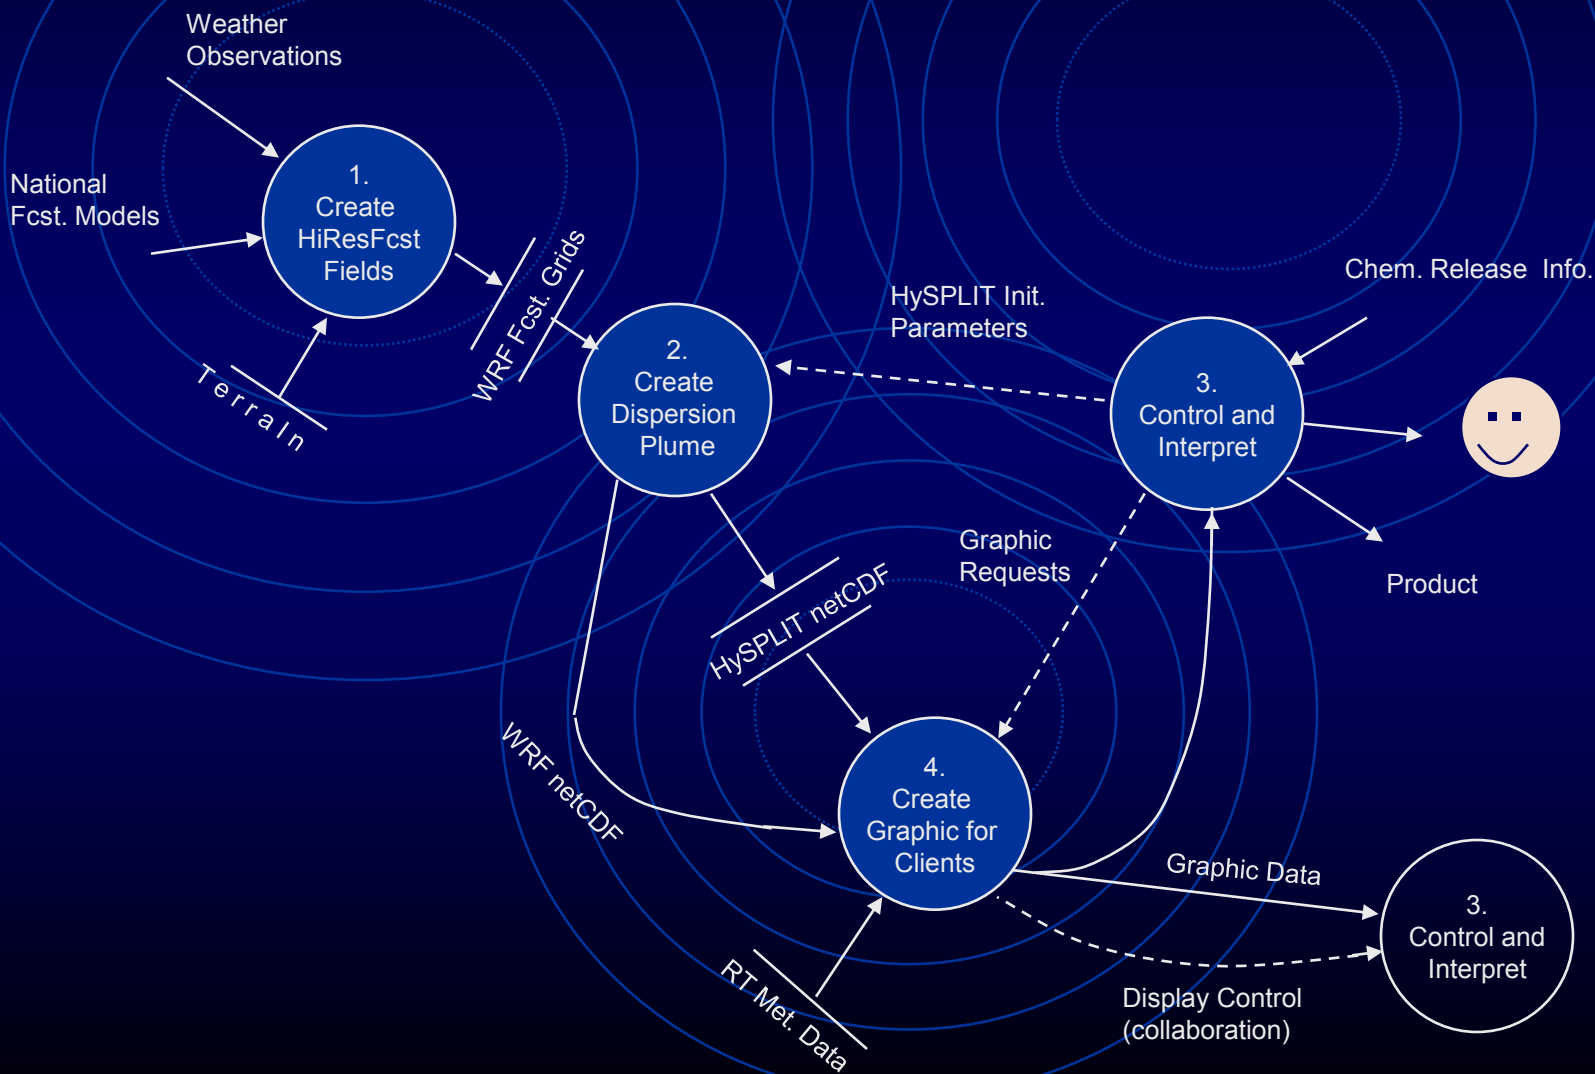

# Basic GTAS Features

- Real-time Weather Display
- HYSPLIT Dispersion Model
- Collaboration (EOC, NWS, ...)
- GIS Database (shapefiles)
- Graphic Annotation / Alert Polygon
- Dissemination  
CAP, R911, Web Image, KML

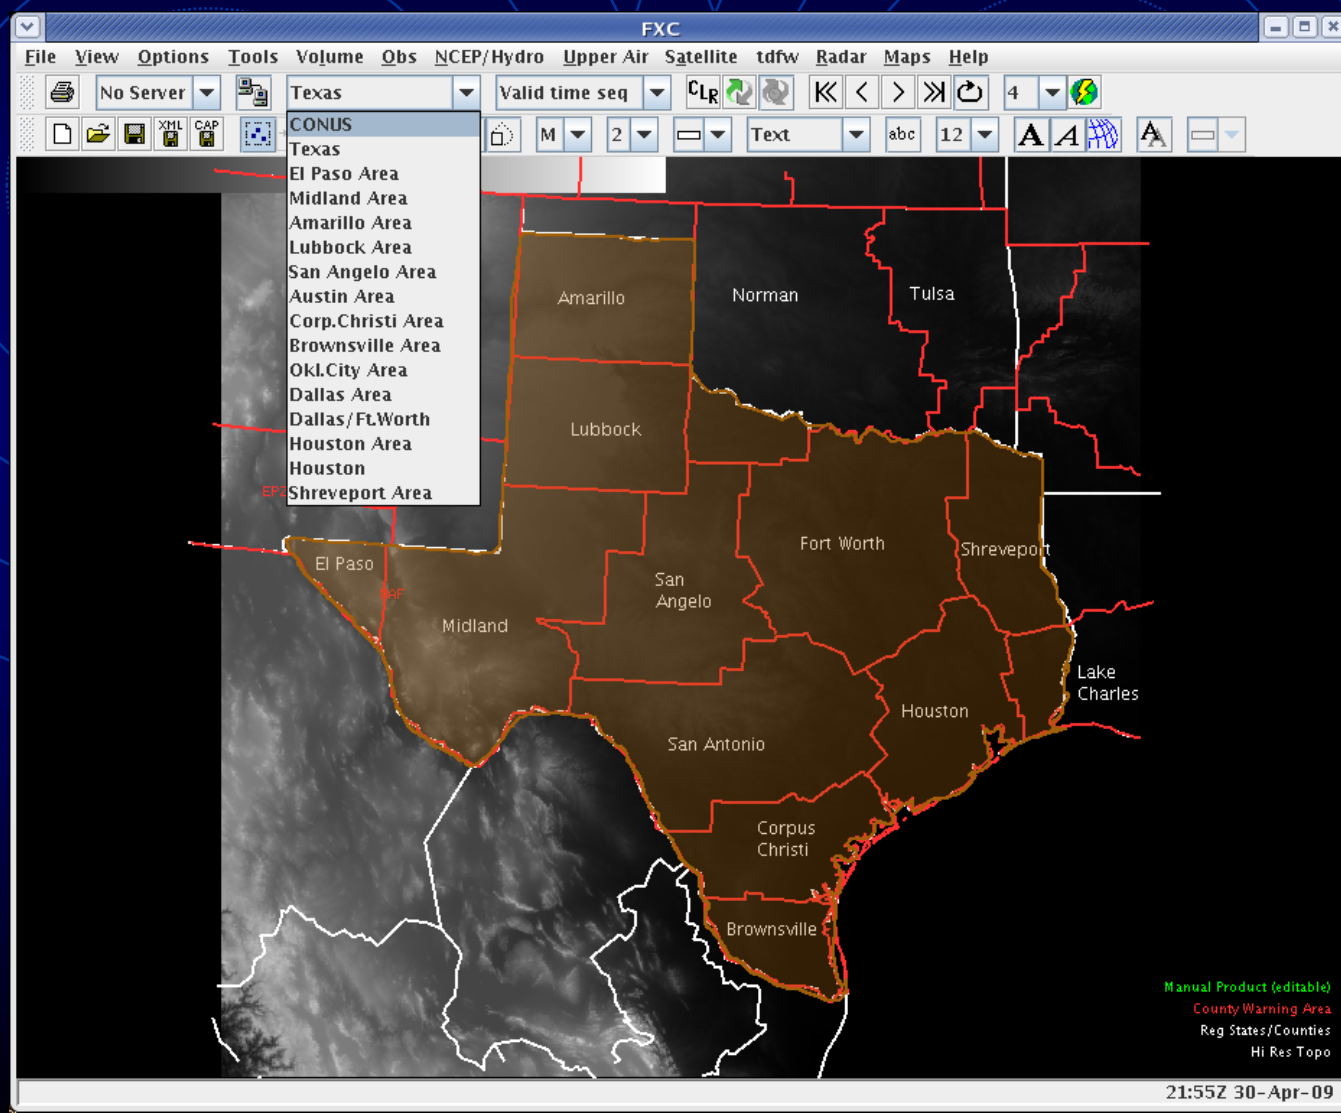

# GTAS Data Interfaces

# Texas Domain

# HYSPLIT User Interface

Run Dispersion Model

Start Time

☒ Use current real time

☐ Use specified time: 18 : 10 GMT  
29 Apr 2009

Total Run Time (hrs): 12

Releases

Chemical: ammonia liquefied

☒ Weight (lbs): 1.00

☐ Volume (gal): 1.00

☐ Estimate: container (1 gal)

Duration (hrs): 1.00

Emission Rate: 1.00

Lat/Lon in degrees, height in meters AGL

Lat: Hgt: 0.0 From Map...

Chemicals and Release Points:

Chemical	Amount	Duration	Rate	Latitude	Longitude	Height
----------	--------	----------	------	----------	-----------	--------

Add Remove

Top of Model Domain (meters AGL): 5,000 Vertical Motion Option: Data

Status: Specify complete set of parameters to run model.

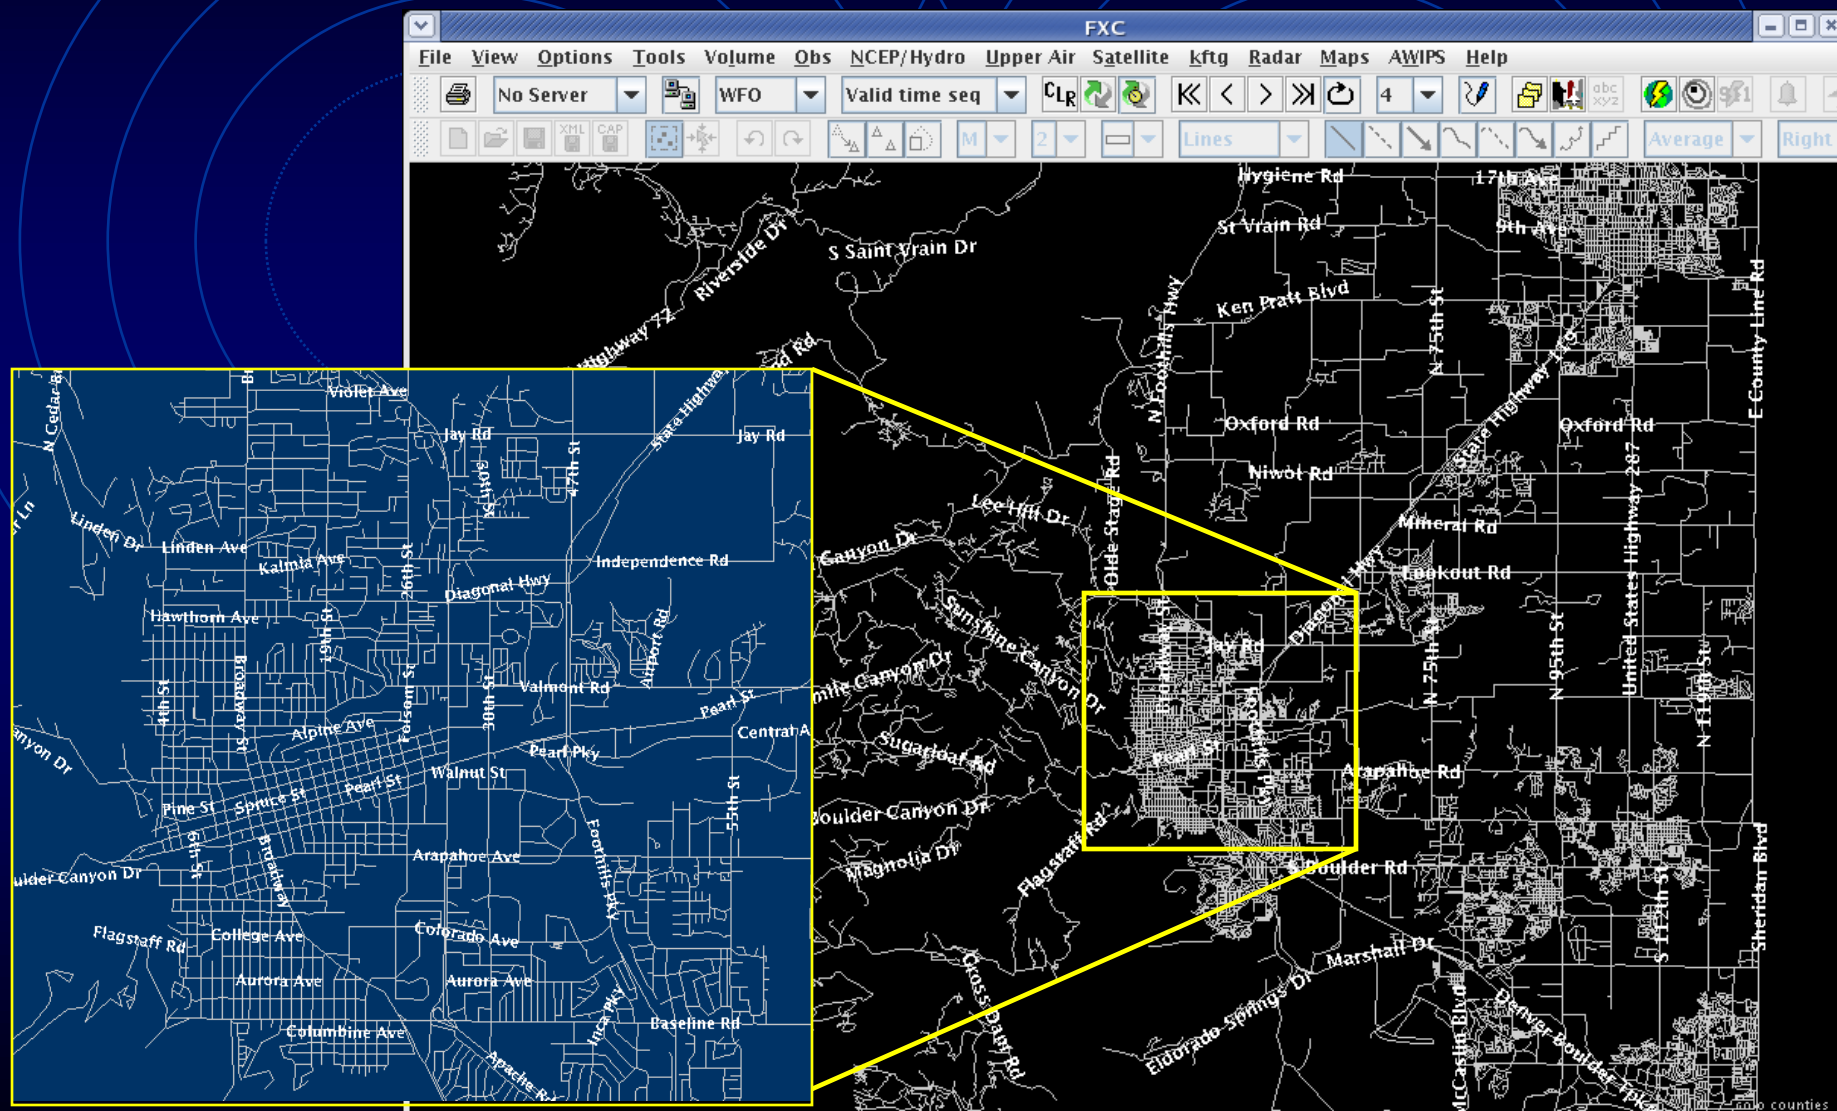

Run Stop Close

# Shapefile Display

DISASTER MANAGEMENT  
INTEROPERABILITY SERVICES

# Brief History Responder's Vision

- Leverage technology to gain efficiency
- Develop a national emergency information interoperability service enabling horizontal and vertical data sharing

# GTAS Security

- Client and server behind network firewalls
- Single server port opened
- Server port restricted to specific clients
- Network address translation / port forwarding
- Keys & certificates for R911 https

# Technical Development

GTAS Deployment

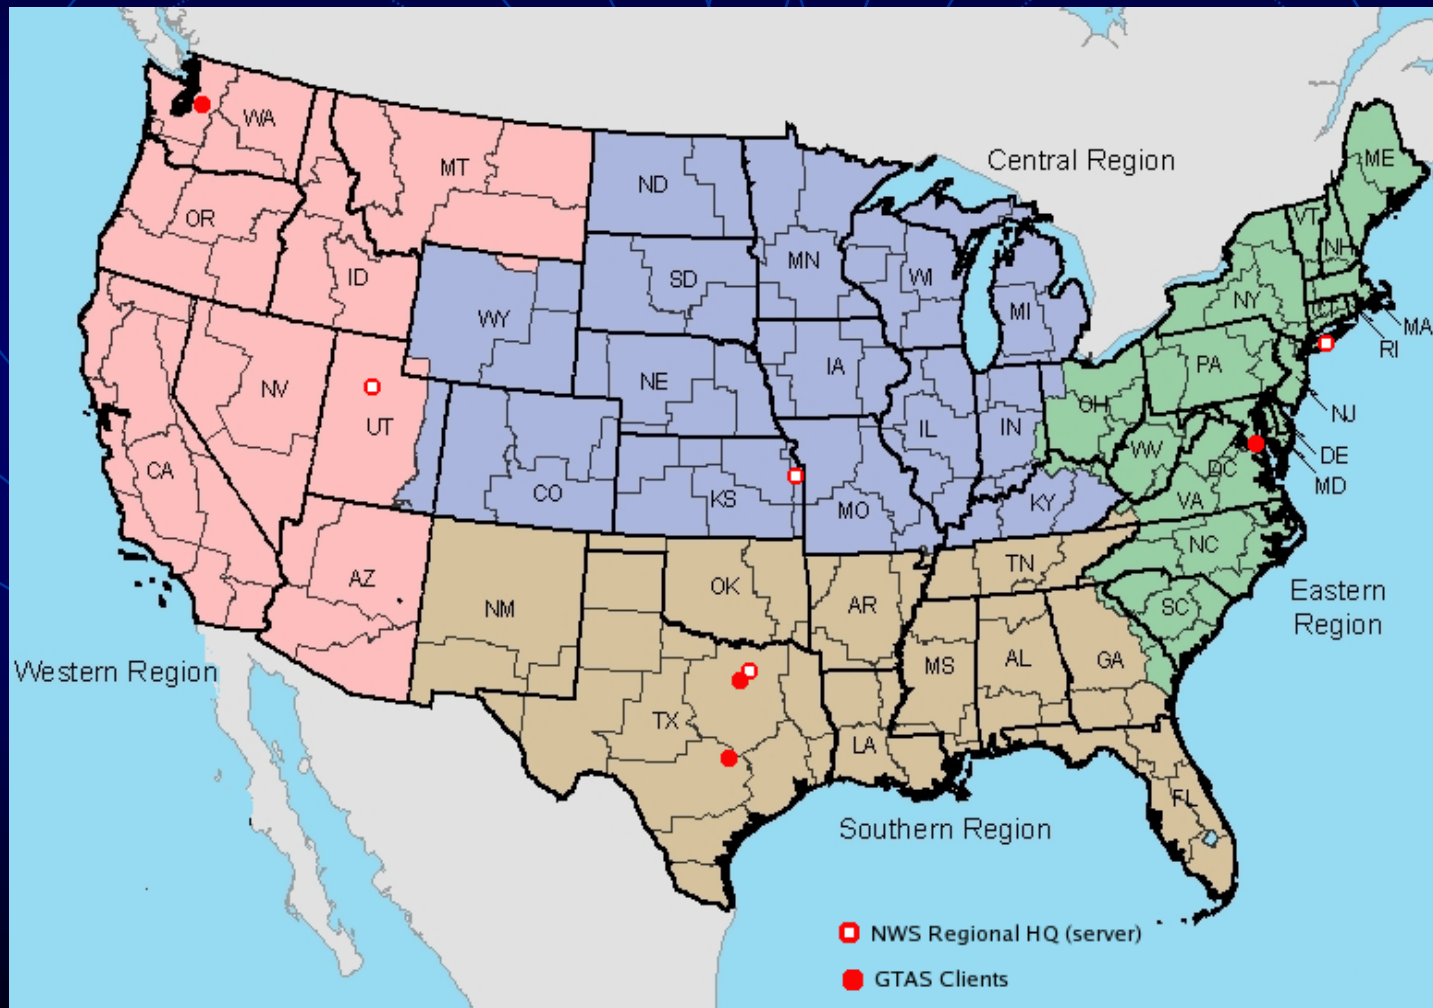

Greg Pratt

# GTAS Prototype Pilot Sites

- Site participation is voluntary.
- Client sites must supply their own hardware.
- Client system must have access to the internet.
- Client sites must be willing to work with us to resolve firewall issues.

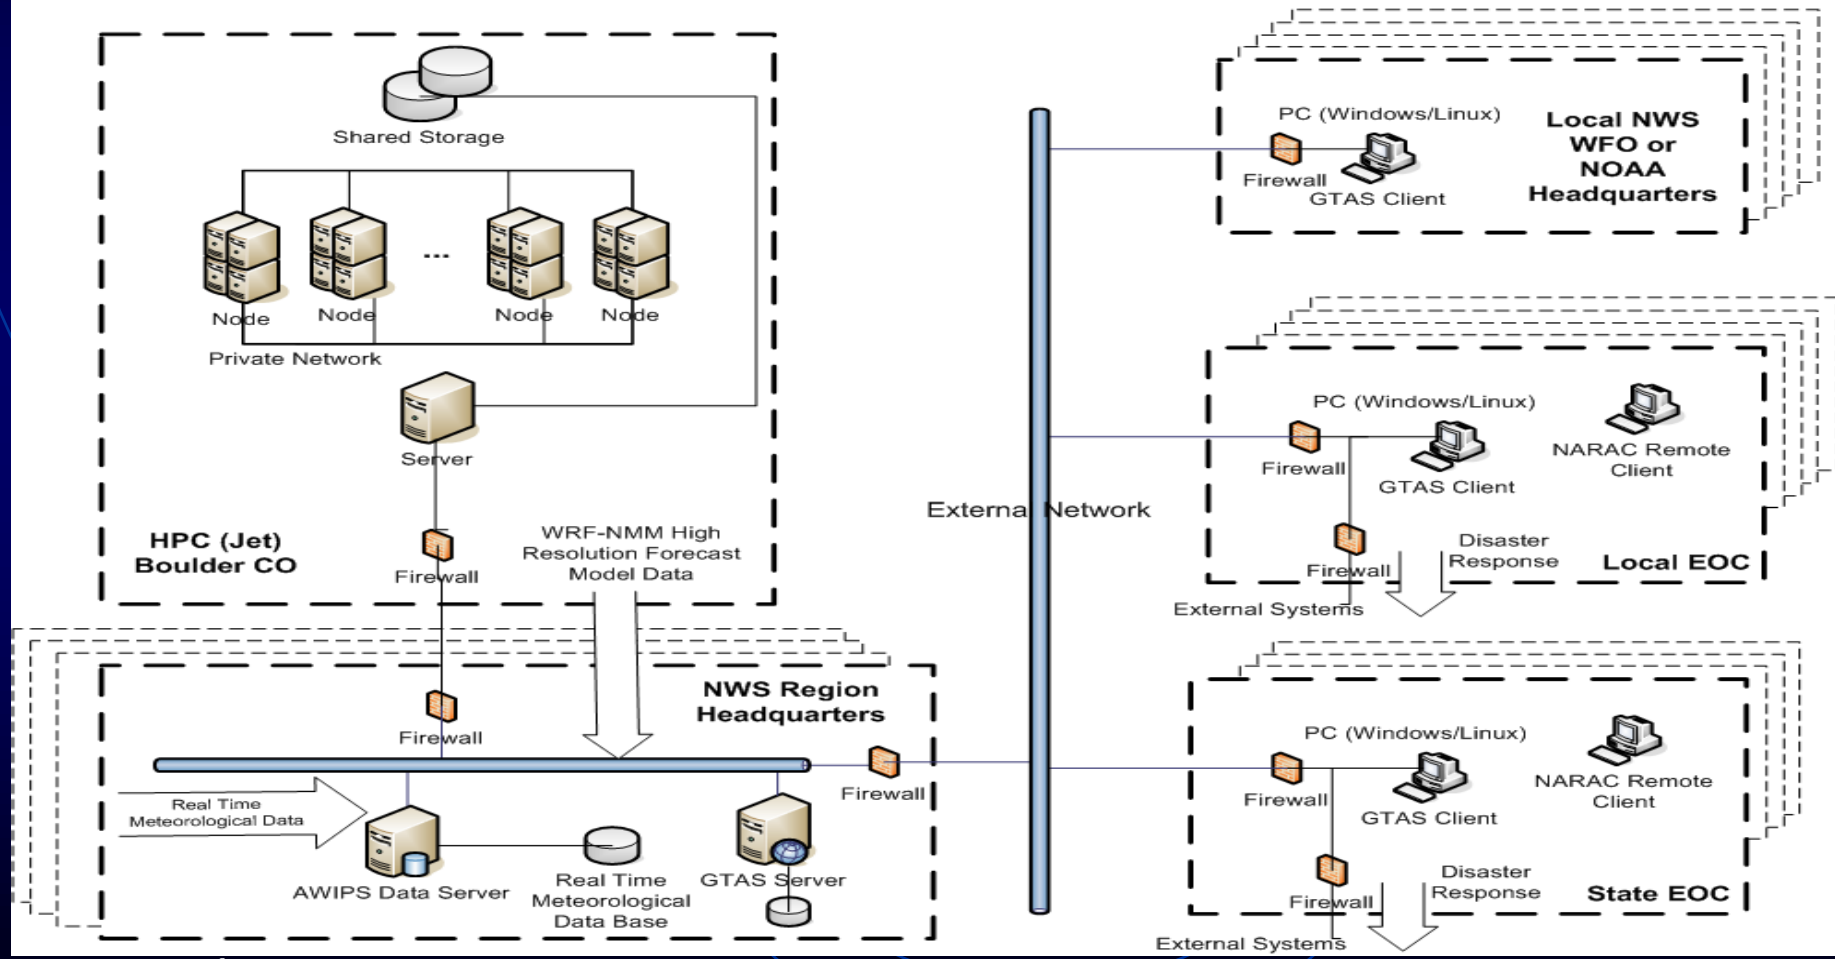

# GTAS Deployment

# GTAS Region Configuration

## -- GTAS System Architecture --

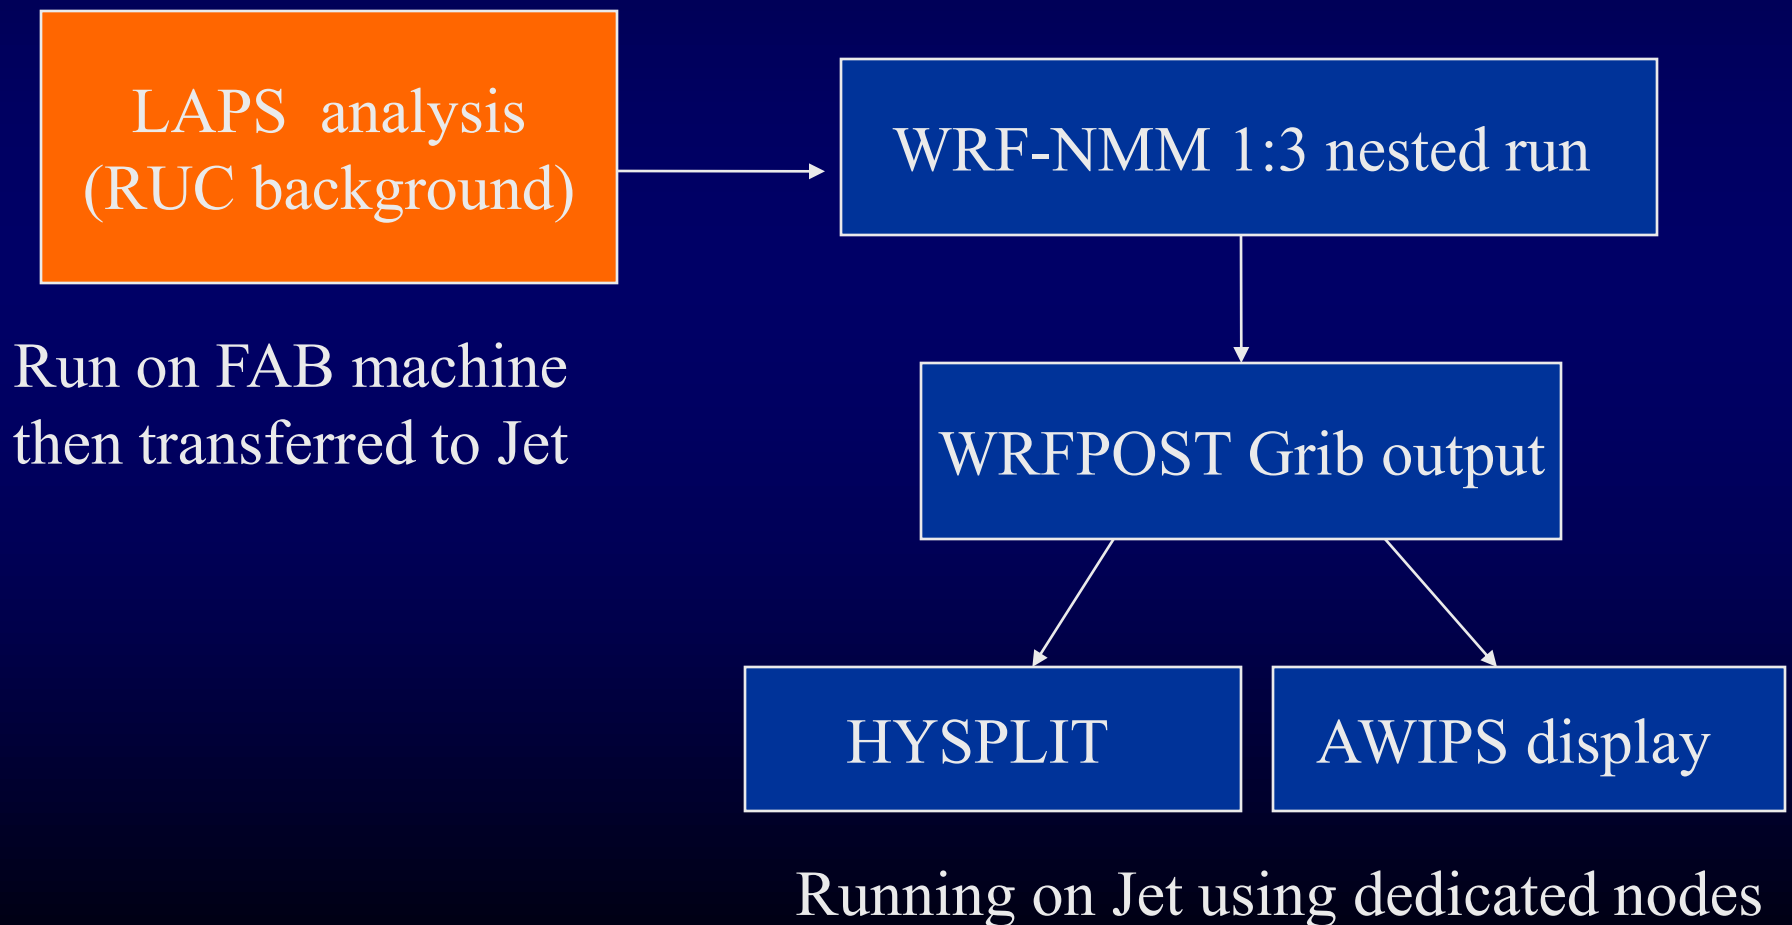

# GTAS Analysis and Modeling Activities

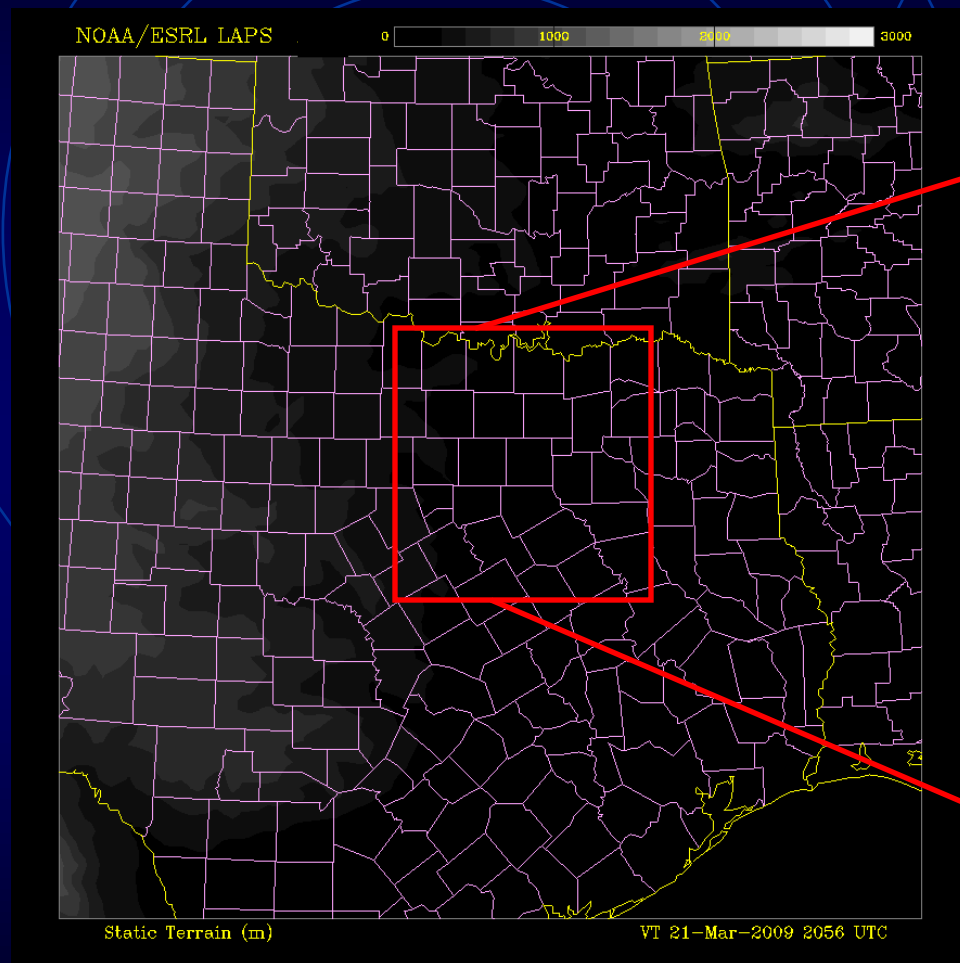

Isidora Jankov, Steve Albers, Linda Wharton and Paula McCaslin

Numerical integrations are initialized with LAPS and performed by using WRF-NMM

# The first test domain: NWS Southern Region Centered Between Dallas and Fort Worth

4.5 km

1.5 km nest

# LAPS surface temperature and Wind analysis

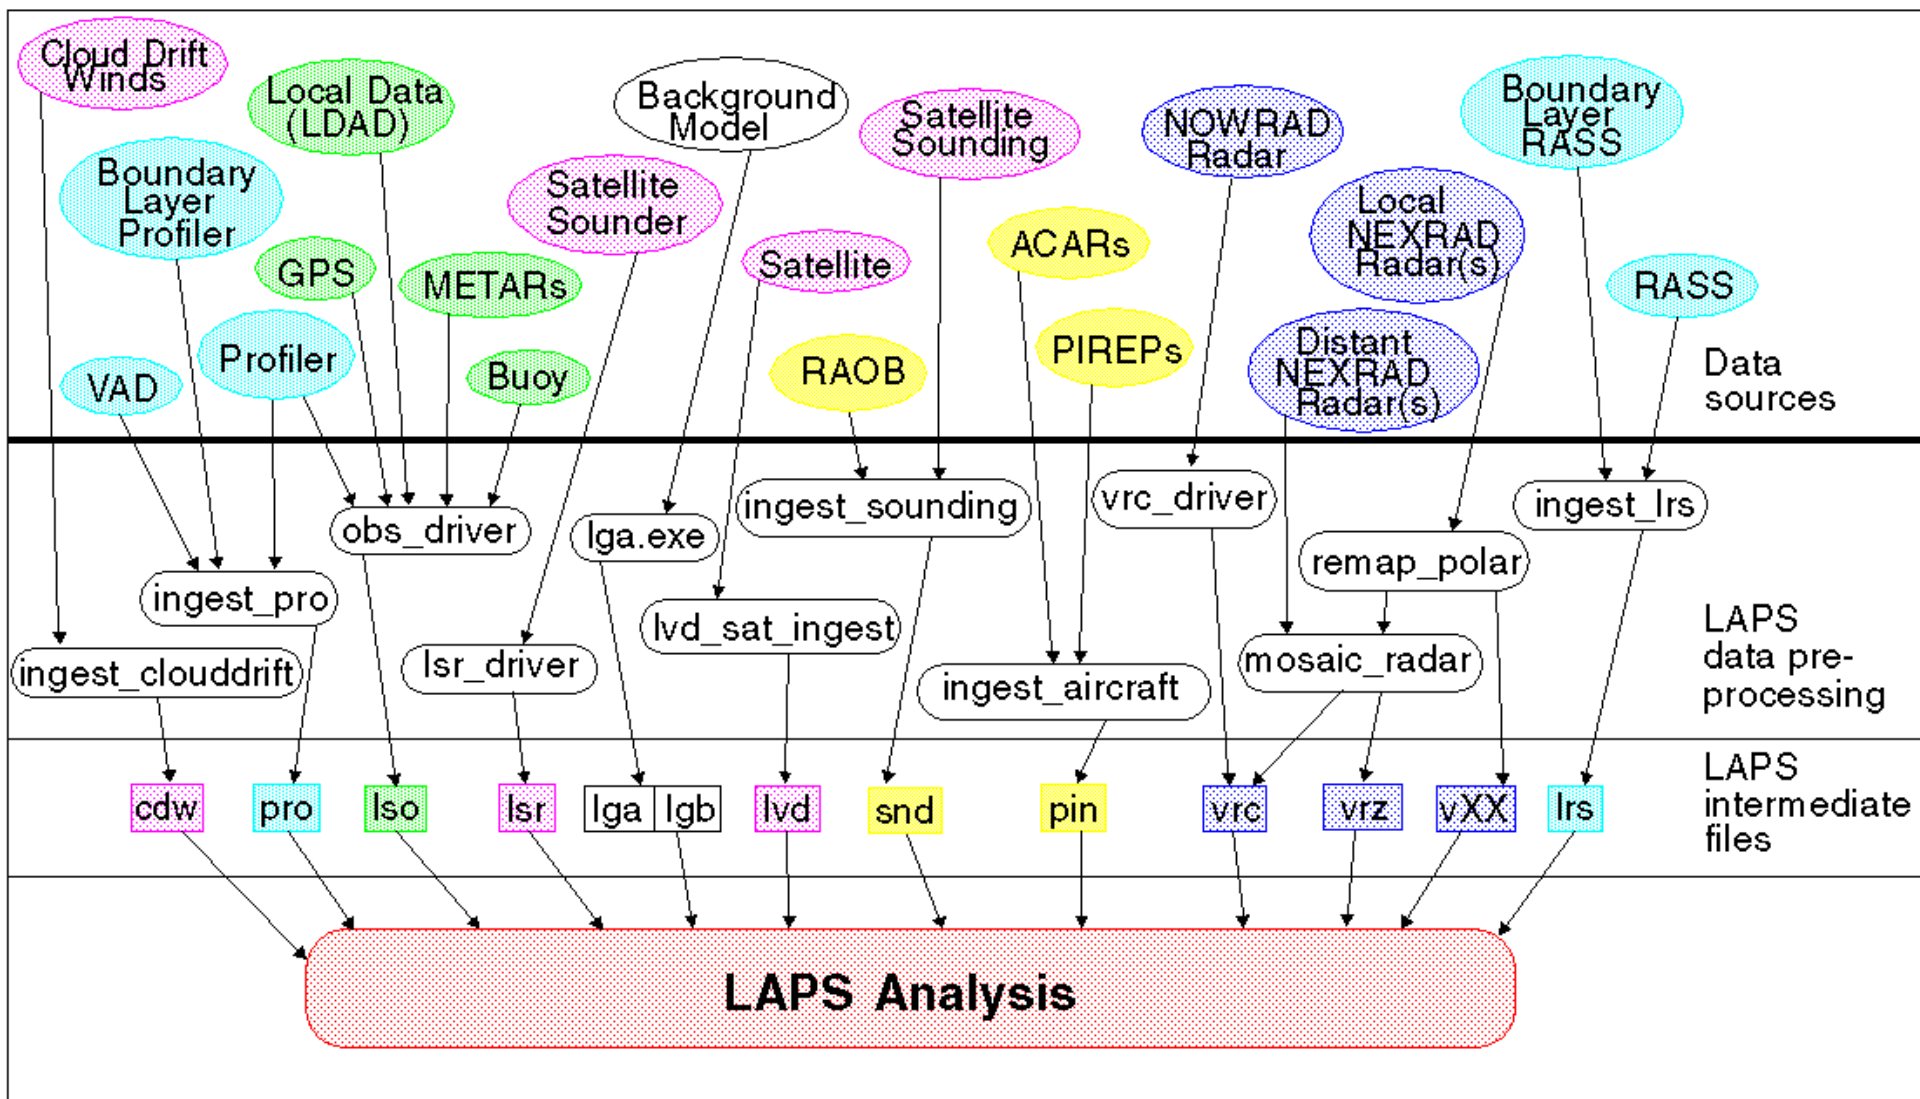

Valid at 20 UTC 27 April 2009

4.5 km

1.5 km nest

# Vertical XSCTs of wind and temperature analysis for the 4.5 km domain and 1.5 km nest

## SOUTHERN REGION MODEL RUN SPECIFICS

Outer nest: 4.5 km horizontal grid spacing and 38 vertical levels  
(140x280) pts

Inner nest: 1.5 km horizontal grid spacing and 38 vertical levels  
(140x280) pts

The outer model nest is initialized using LAPS

Currently running in real time with 3-hr cycle

NAM 12-km is used for Lateral Boundary Conditions

24 forecast hours and output every 30 minutes

Currently by using 56 CPUs it takes ~40 minutes for 24 hr long  
forecasts to run.

The plan is to have model (nested runs) for Western Region (Seattle),  
Central Region (Kansas City), and Eastern Region (NYC and Washington D. C.)

# 1-hr WRF-NMM forecast of surface temperature and temperature-wind XSC

## **Outline:**

**GTAS System Training**

**GTAS System Testing**

**GTAS System Evaluation**

**GTAS System Documentation**

# GTAS System Training

## Objectives:

To familiarize users of the following....

**GTAS System Operations Concept**

**FX-Collaborate (FXC) User Interface**

**HySPLIT Dispersion Model**

# GTAS System Training

## Approach:

### 3 STEPS...

#### Pre-Deployment Training

- Conducted remotely via GoTo Meeting and conference call approx. 2 weeks before Post-Deployment Training
- Overview
- Multiple training sessions possible per Site
- Training Participants - WFO Forecasters, EOC EMs

#### Post-Deployment Training

- Post GTAS System installation
- On-Site training at each WFO and EOC
- Multiple training sessions possible per Site
- Training subjects include...

**GTAS System Operations Concept**  
**FX-Collaborate (FXC) User Interface**  
**HySPLIT Dispersion Model**

#### Recurring Training

- Conducted remotely via GoTo Meeting and conference call on a monthly basis for each site
- Hazard Emergency Training Scenarios

# GTAS System Training

## Personnel Requirements:

### Training Staff

GSD Personnel

Air Resources Laboratory (ARL) Personnel

### Support Staff

Personnel at each WFO and EOC

Personnel at NWS Regional Headquarters

### WFO Forecasters

### EOC Emergency Managers

# GTAS System Testing

## Objectives:

**Verify GTAS System is operationally ready**

**GTAS NWS Regional Server Testing**

**GTAS Client Testing**

# GTAS System Testing

## GTAS NWS Regional Server:

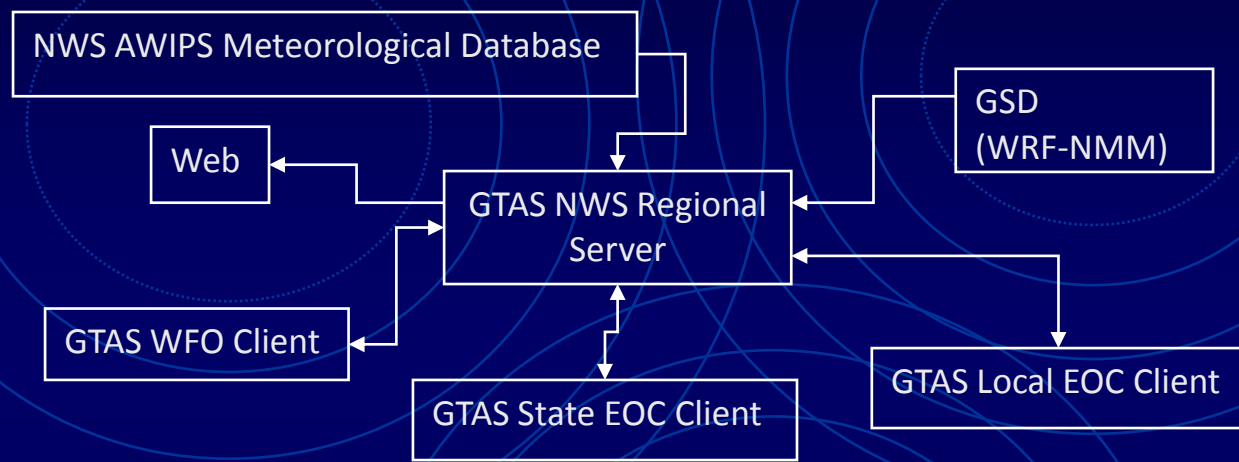

Figure 1: GTAS System Testing Diagram - Components

### Check List –

- AWIPS Meteorological Database accessible?
- Real-time WRF-NMM Model data being ingested?
- Running and able to accept remote connections from the GTAS Clients collaboratively and independently?

# GTAS System Testing

## GTAS Client:

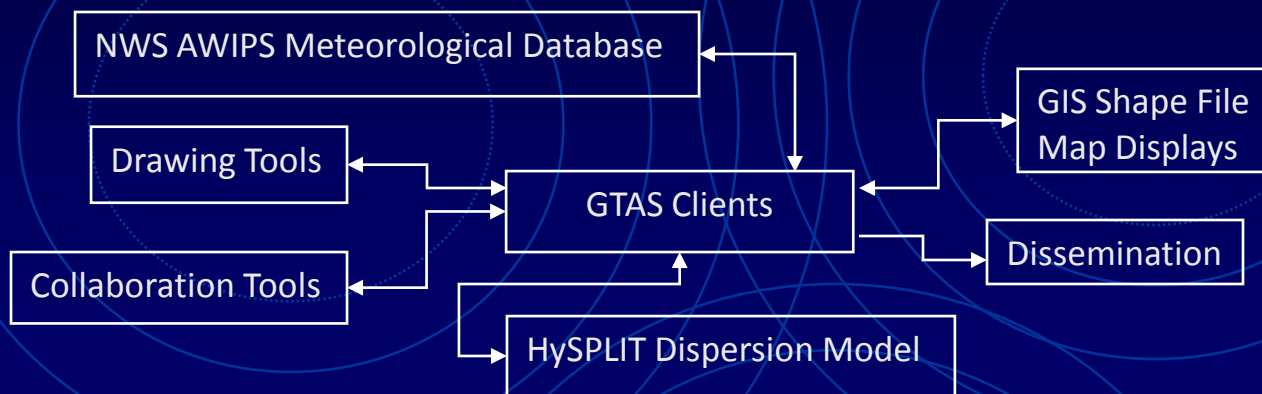

Figure 2: GTAS Client Testing Diagram - Components

## Check List –

- Can communicate with Server?
- Can display real-time meteorological data?
- Can display GIS Shape File Maps?
- Can display and run HySPLIT?
- Drawing and collaboration tools work?

# GTAS System Evaluation

## Evaluation Questions:

Does the GTAS System *provide* toxic plume dispersion and meteorological data *efficiently* and *effectively*?

Does the GTAS System *enhance relationships* between the WFOs and EOCs?

Is the GTAS System user interface *user-friendly* in order to assist the EOCs with their mitigation and response plans?

# GTAS System Evaluation

## Evaluation Methods:

Online Questionnaires

Interviews

Observations

System Logs

# GTAS System Documentation

## Report Preparation:

**Provide Catalog of User Feedback and System Log Results**

**Provide Report Summarizing T&E Results and Recommendations for Future Deployment**

# Summary

Greg Pratt

# FY09 – Dec 31, 2009

- 5 WRF-NMM areas defined and running at 4.5/1.5km every three hours here at GSD.
- 4 Regional GTAS Servers receiving WRF-NMM and AWIPS meteorological data (Southern, Western, Central, Eastern).
- 4 WFOs , local EOCs and state EOCs trained and coordinating/collaborating with GTAS client systems during real and staged events.

# FY10

- Enhanced GTAS evaluation and report.
- Add six additional sites including the south eastern U.S. with added Hurricane applications.
- Improve systems based on feedback from users.

# FY10

- Add WRF-Chem model.
- Work with western region on PDA delivery of meteorological and toxic dispersion displays.
- Work with southern region on defining NWS operational architectures for GTAS:
  - Virtual servers.
  - WRF-NMM model runs.

# FY11 – FY13

- Improve systems:
  - More tightly coupled system to NARAC and other systems at EOCs.
  - Wet/Dry Chemical Deposition.
  - User feedback.
  - Understanding of needs.
  - New and emerging technologies.
- Provide NWS with GTAS requirements that will be added to OSIP.

# Questions
